

The convenience of an app. The power of your software.

You ought to be able to do your work with the device that's already in your pocket. But most public safety software apps leave plenty to be desired. They do too much. Or too little. You want real-time data updates. To collect digital evidence. To view maps and call details. To stay on top of situations with a secure application that performs as well as the other apps on your smartphone. Is that too much to ask?

Designed With Your Actual Work in Mind.

When we decided to create **Field Ops**, our mission was to do far more than just add mobile CAD function to your smartphone. We wanted to deliver the real life features you need to complete tasks away from your computer. To be able to do that, we did a lot of research. We went to agencies to see how they worked. Saw what they wanted to be able to do on a smartphone or tablet. We didn't try to make **Field Ops** work like your CAD or RMS. Because it's something different. And really better than everything else out there.

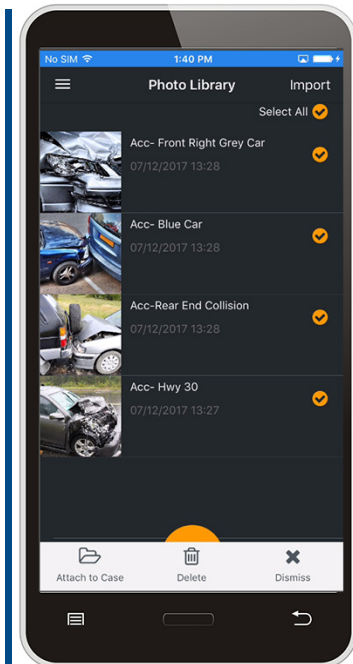

Situational Awareness Equals Officer Safety.

Field Ops puts access to essential data on the phone screens of your responders and your command staff. The app is designed to provide instant access to everything you need to know on the device you already have in hand. See the most important call for service data, including comments from dispatch, alerts, and assigned units. An integrated interactive map lets you view CFS and units with AVL.

Quick information is literally at your fingertips, just a tap or two away. And it's easy to use. Filter active and pending calls. Get a notification of assigned CFS. Specify the unit list you want to see. With the details that matter to you: status, location, and details like agency, unit type, and personnel. It saves time and provides valuable insight to on-duty and off-duty responders and those who supervise them.

Digital Evidence Capturing—No Extra Device Needed.

Your smartphone has an excellent camera and the ability to capture audio and notes. Why carry anything else on the scene? With **Field Ops** you can directly upload media to a case right from the app. Don't waste time transferring media from a separate device. Keep your responders out there in the field, doing what they're supposed to be doing.

Easy to Deploy: Just Download It.

Whether you've got a few or many users, **Field Ops** is simple to manage. Your agency can use the app on any existing Android or iOS smartphone or tablet. Simply download the app from the Android or Apple app store. Your authorized users log in with their existing Zuercher Suite credentials.

There's little configuration for administrators. It's so easy to use, training really isn't necessary. **Field Ops** works just like your favorite apps. So it's easy to jump in. Plus, when you collect evidence on your own device, within the app, you get interoperability and compatibility. Your images, notes, and location are all part of the same platform.

Secure and CJIS compliant.

Field Ops is easy to access and use—just like the rest of the apps you access daily on your smartphone. Yet it's secure. Use your existing Zuercher Suite login credentials for authentication. The app is FIPS 140-2 compliant and has optional multi-factor authentication to fulfill CJIS Advanced Authentication Requirements.

Make It Happen.

Get ready for a mobile public safety software app that makes your smartphone a fully-functioning public safety tool. Contact our sales team for information or a demonstration of **Field Ops**.
